Construction Pipeline Planning and Data

Theme: Pipeline

Key words: construction projects data; pipeline projects data; construction data quality; projects data; construction data standardisation.

A clear and reliable construction pipeline is essential for infrastructure planning, investment, industry capacity and long-term decision-making. This study examines New Zealand's construction pipeline landscape through four prominent pipeline datasets, identifying inconsistencies that limit their clarity, comparability and integration. It proposes a conceptual Minimum Dataset (MDS) framework to support a more consistent, coordinated and useful construction pipeline for New Zealand.
