Construction Resilience and Disaster Response

Theme: Shocks and Stresses

Key words: contractor adaptability, contractor resilience, post-disaster reconstruction.

Natural disasters place construction contractors at the centre of both emergency response and long-term reconstruction. This study examines how disasters affect New Zealand contractors, including the opportunities created by reconstruction demand and the challenges arising from workforce and material shortages, financial losses and weather-related disruptions. It also identifies practical strategies for strengthening contractor preparedness, adaptability and resilience in responding to future disaster events.
